

Power. Speed. Precision.

Deliver better software solutions faster

with Automate BPM

Automate BPM helps you deliver powerful solutions quickly and inexpensively.

Companies constantly struggle with containing the high costs of building and maintaining custom software that is demanded by their unique business requirements. Or they have to live with one-size-fits-all solutions that fail to maximize business performance.

Now there is a better way to deliver the benefits of custom solutions with the low cost and quick turnaround of off-the-shelf software.

Automate BPM from Macronetics delivers the power, speed, and precision required to create robust, customer-focused solutions quickly, successfully, and affordably.

Automate BPM provides, in one integrated platform, all the tools necessary to build and deploy sophisticated web-based applications that are secure and SOA-ready.

The main components of *Automate BPM* include:

1. Rules engine – Implement simple and complex rules with ease
2. Workflow engine – Flexible and adaptable business processes
3. Forms engine – Powerful web forms with no programming
4. Integration engine – Connect to any database and web services
5. Graphical dashboards – Monitor all key performance indexes

Solution delivery time and costs are reduced by 80% or more.

Automate BPM speeds up solution delivery time significantly, in many cases compressing development time from months to a couple of days. Just as important, deployed applications can be modified with a few mouse clicks, with no interruption to on-going operations.

Automate BPM reduces your costs and boosts profits in all phases of solution delivery, from creating demonstration prototypes to rolling out full-scale production systems.

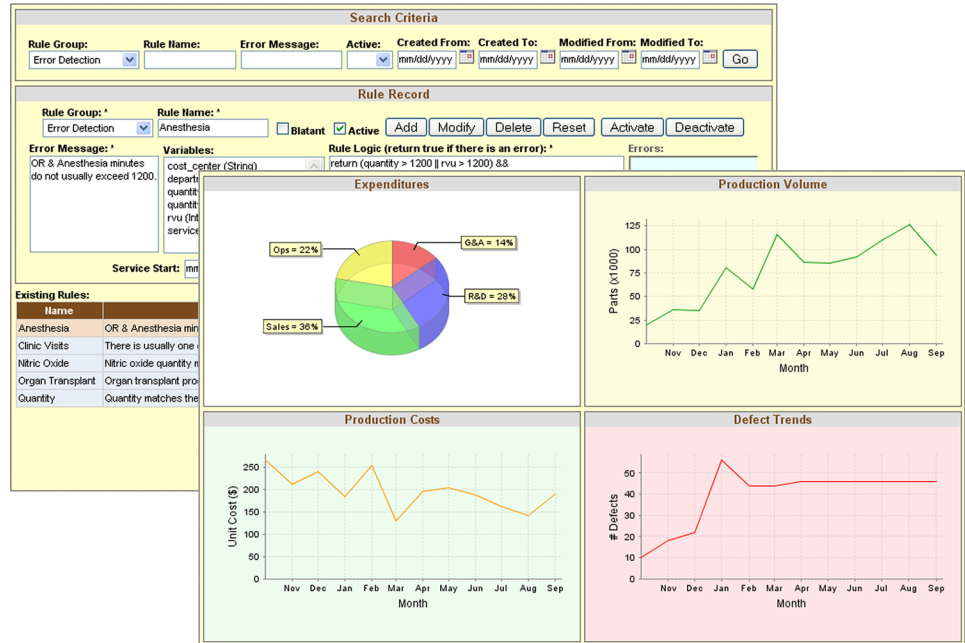

Customer Successes

Automate BPM has been successfully deployed at Fortune 500 companies and government agencies for many applications:

- Lean Six Sigma
- Crisis Response
- Executive Decision Support
- Public Services
- Revenue Recovery
- Fraud Detection
- Performance Management
- Regulatory Compliance

Powerful Web Interface

Automate BPM is 100% AJAX-enabled to work like regular desktop applications, but require only a web browser. You can create powerful web forms to display information from multiple data sources and process user inputs according to your business rules. Graphical dashboards help you monitor and optimize your business performance.

Strong Data Security

Automate BPM employs multiple layers of security to protect your data from unauthorized access. Additionally, all sensitive information, such as passwords, are stored in encrypted format.

Designed for Scalability

Automate BPM is built on top of the proven J2EE technology stack to ensure high availability and scalability. Furthermore, *Automate BPM* servers can be federated to handle extremely large user populations.

Compliant with Open Standards

Automate BPM complies with industry standards to promote easy integration with your IT infrastructure and minimize system migration risks. By the same token, your staff can become productive with *Automate BPM* quickly, minimizing learning curve and training costs.
