

Progression 7.7.100 Release Notes

Progression 7.7.100 represents the most current Progression release. As such, it includes quality fixes. While Progression 7.7.100 has been designed to work with the Microsoft® Windows Vista® operating system, Vista is not a requirement for using this release. Progression 7.7.100 is fully compatible with Windows XP Professional and Windows 2000 workstation, as well as Microsoft Vista.

Progression 7.7.100 Considerations:

- You must currently be using Progression 7.7 to update to Progression 7.7.100.
- The Progression Integrated Crystal Reports (ICRs) no longer use Crystal version 8.5 components. Existing Progression 7.6.400x installations that currently use the Crystal 8.5 run-time will have the option of being updated to Crystal run-time versions 10 or 11.
- Microsoft SQL server 7 is not supported with Progression 7.7.100. Supported Microsoft SQL versions are SQL 2000 and SQL 2005. Do not attempt to use Progression 7.7.100 with a Microsoft SQL 7 database.
- Progression 7.7.100 has been designed to be compatible with Microsoft Vista, with the following considerations:
 - The Progression 7.7.100 Update process can be run from a Vista workstation. Please run the update from your Progression application server or a Windows XP or Windows 2000 workstation.
Note: If you run the update process from a Vista workstation, it is important that you reboot the Vista workstation used to update to Progression 7.7.100 after the update process (Steps 1 and 2) has completed and before installing the Progression client.
 - Exact EDI is not supported on Microsoft Vista
 - Exact WMS version 8.4.1 is not supported on Microsoft Vista - Exact WMS version 8.5.0 is supported on Microsoft Vista
 - Forecast Pro version 4.4.0 currently supported with Progression does not support Microsoft Vista
- Release dates for the following products are currently TBD:
 - Flexibility
 - Progression e-Commerce (Web Views/Web Orders)
 - Btrieve to SQL Conversion

Quality Fixes:

The Quality Fixes that are included with Progression 7.7.100 are available on the Installation and Update CD. You can also view via this link:

[Progression 7.7.100 Quality Fixes and Screen Changes](#)

Ordering a Physical Update CD:

Customers that have a current maintenance contract with Exact Software North America and prefer to receive a CD can submit a software update request via the portal.
