

# Exact Synergy: Software Development Kit (SDK)

## “Customize your solutions with the Exact Software SDK.”

Businesses that take the time to view the world through their customers' eyes are usually rewarded by repeat business, customer loyalty and a healthy bottom line. Imagine if you could alter a solution to fit the exact need of your business and your customers.

The Software Development Kit (SDK) from Exact Software™ allows you to create custom solutions for Exact Synergy™ and Exact Globe Enterprise™, connecting the people, processes and knowledge that matter most to your business.

Benefits derived from the Exact SDK™ include...

- Extend your ROI by customizing solutions to fit business processes
- Custom solutions appear fully integrated to users
- Better alignment with vertical business requirements
- Custom solutions can be standardized in their design

With the SDK you have the ability to modify all three layers of the Synergy® architecture, including the User Interface, the business objects (COM) and the database. The Exact SDK makes it possible to customize Synergy and Globe beyond the basic functionality to meet specific business demands.

### Develop New Functionalities and Solutions

Comprehensive use of the SDK can result in the development of new functionality and industry-specific solutions, above and beyond the standard Exact Synergy or Globe functionality. From the user's perspective the enhancements can appear seamless with the existing application.

Improve information collection throughout your entire system by creating new custom database fields and extending the preconfigured fields in your existing tables or creating new tables.

Configure business/industry related attachments and add-ons with functionality specific to your line of business. Generate a module that communicates and integrates with separate databases utilized throughout your organization for better collaboration and information sharing.

### Software Development Kit benefits:

- Customize database fields & tables
- Create or extend data entry and process applications
- Configure business/industry related attachments and add-ons
- Generate links that connect to information portals
- Extend and enhance elements of code for custom reports
- Import and export data via XML

# Exact Synergy: Software Development Kit (SDK)

## Connect to the Right Information

Generate links and connections to information portals like MapQuest®, UPS® or competitive Websites. Create intelligent links that will immediately generate workflow or service requests.

Extend and enhance elements of code for custom reports that can be connected to a data record for constant analysis and decision making.

Import and export data via XML to and from your database. Integrate with other modular solutions to create an information chain that forms intelligence around the people and the knowledge within your company.

The SDK takes the focus off of the products you deliver, and puts it back onto the business issues that Exact technology solutions can address.

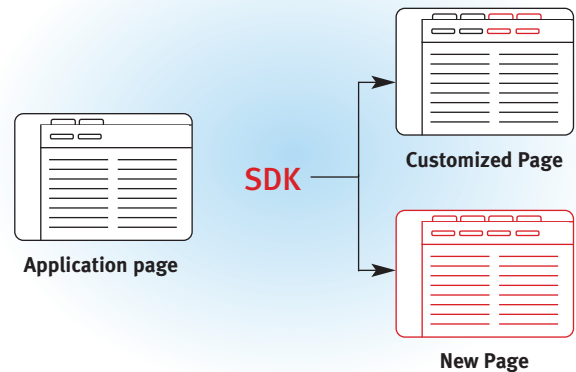

**Exact SDK is supported by the following programs for custom development and support:**

- Custom-solution development Training using Microsoft Visual Basic 6.0, SQL and ASP programming
- Business Partner Certification program
- SDK Solution Certification program
- Web support via the Exact Software portal on technical "How To" questions
- Access to Developer community (Exact Software Forum)
- Access to the SDK Resource Page, with:
  - SDK Technical Reference Guide
  - SDK Tools manual
  - Example applications and corresponding source code
  - Test applications and corresponding source code
  - Frequently Asked Questions
  - SDK Release Notes and latest news
  - Code templates

## SDK Model

Comprehensive use of the SDK can result in the development of completely new functional or industry-specific solutions "on top of" existing applications.

## User Interface Customization

SDK users can extend or modify the UI layer by adding new buttons or tabs to existing ASP pages, creating new pages, and redirecting standard pages to custom pages.

## Database Customizations

SDK users can modify the application database model and automatically customize the repository, by creating fields in existing tables, adding new (custom) tables and generating new (custom) settings.
