The Power of Answers

Exact Software delivers answers via business analytics with comprehensive access into various business management applications, Enterprise Resource Planning (ERP) systems, CRM, SCM, etc. We believe that a vital element to a successful business intelligence solution is tight integration with the business management system. Exact's rich metadata model provides insight to a wide range of functional information, covering sales, financial, inventory/purchasing, manufacturing, and other business areas. This integration along with standard views and a streamlined architecture provides business people with powerful analytic, reporting and dashboard capabilities. Graphical Performance Series® (GPS) can be woven into the fabric of your systems and daily routine, providing answers and analysis directly from your business management applications.

Graphical Performance Series is:

POWERFUL

Quickly and easily build Information Views and reports, dynamically combining and analyzing information from multiple sources, regardless of the business category or physical location of the data

Integrated query, reporting, and analytical tools, enable users to access vital business information, perform in-depth analysis, and share the results throughout the organization—all from a single, comprehensive user interface

With one mouse click, GPS delivers management views, dashboards and reports incorporating business metrics and key performance indicators either connected to the network or totally detached (while traveling on an airplane or impromptu ad-hoc analysis offline)

PRACTICAL

Put information and control in the hands of business users—not just the IT department. GPS offers flexible analysis

options that meet the needs of all types of users

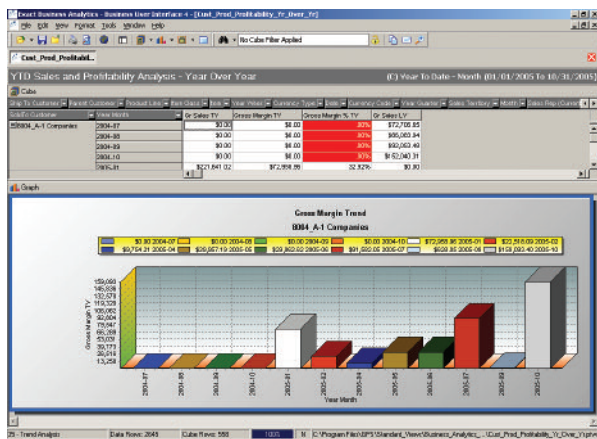

GPS accesses data in place. There is no need to move data or create a data warehouse or data mart, thus saving significant dollars in initial and ongoing cost for hardware and technical services

INTEGRATED

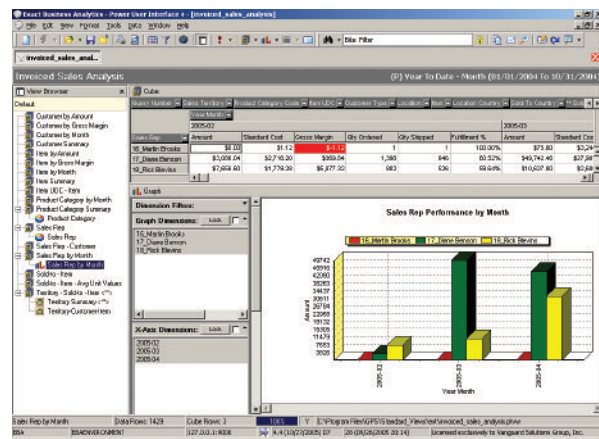

Exact Software offers pre-built integrations that are broad, documented, and supported

GPS integrates and displays data from any ODBC-compliant data source, including ERP, CRM, or legacy systems

GPS's Analytical Model includes pre-defined information views, dashboard and report templates, along with a flexible information model that enables mapping to any source system

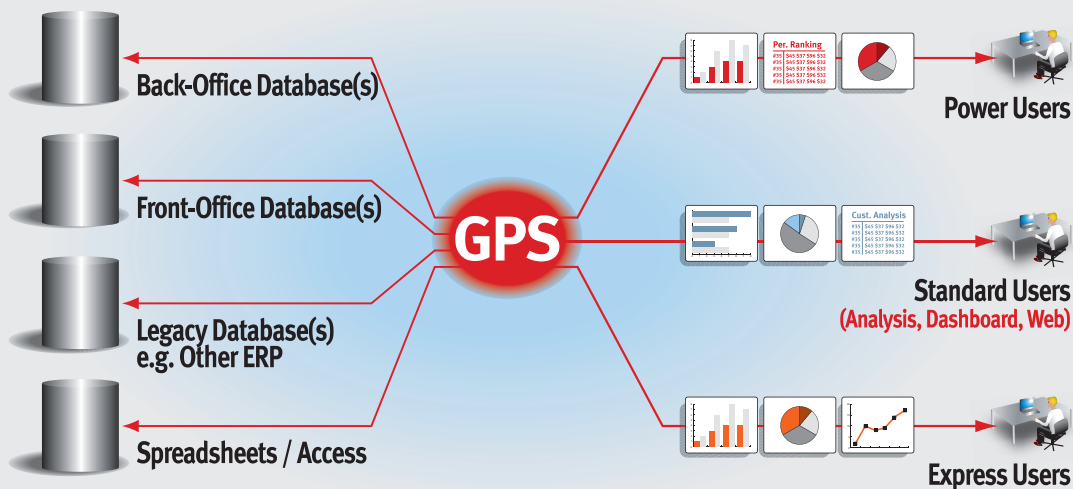

A GPS View renders complex information in very easy presentation formats

A single GPS View empowers business people with easy access to information and analysis eliminating numerous static reports

Extending the value and life of your systems

GPS Model

GPS offers comprehensive access to various ERP solutions as well as any other ODBC compliant solution that an organization may be running.

Users are able to access and report from multiple systems, getting the information they need to make better business decisions.

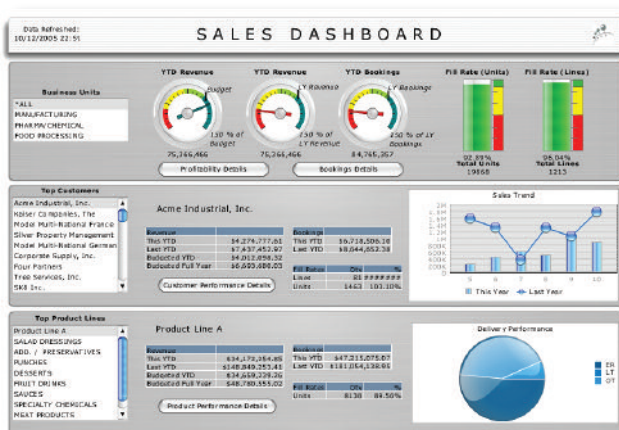

Getting to your information has never been so easy!

There is no need to settle for static reports (i.e. hard coded custom reports or those generated using report writer tools). Many people believe that the report they are used to receiving each week or month is all they need or can afford. The alternative to static reporting comes under the heading of "Business Intelligence" (BI). There is a common misconception that BI costs a lot, is too complicated and only for top management of big companies. GPS is one BI solution that breaks the price barrier; being affordable, accessible for all employees, and easy to deploy. Think of BI as flexible reporting and analysis. This is Graphical Performance Series.

BI is becoming pervasive. Many people are using it but not giving it this title. For example, when a person is researching a purchase via the Web, he or she is using BI when they sort by price or features. This simple example shows how flexible reporting has come to replace the static report. The hard copy performance charts that are often displayed in sales offices or manufacturing conference rooms are being replaced by more flexible "dashboards", another part of BI. Dashboards can be automated and distributed in soft copy with drill downs into the underlying detailed data. The value of BI is tremendous and is becoming essential. One GPS BI "View" can replace dozens if not hundreds of hard copy reports.

Empower your business with the benefits of GPS:

1. Provide answers to business questions
2. Get better insight into exceptions
3. Offer users flexible analysis options
4. Better analyze multi-national, global performance
5. Equip users with information when they need it
6. Get enterprise-wide performance visibility
7. Fully scalable to your organization size

► GPS Dashboard provides comprehensive view of business performance at a glance

**“Paper reports only offered us a summary of what was happening;
with Graphical Performance Series, we can now answer why things
are happening.”**

—Duane Lenz, CFO, PowerVar, Inc.

About Exact Software

Established in 1984, Exact Software is one of the world's leading providers of business software solutions. Its integrated solutions comprise traditional Enterprise Resource Planning (ERP) as well as related software solutions such as Human Resource Management (HRM), Customer Relationship Management (CRM), Project Management, Business Intelligence/Analytics (BI/BA), and Electronic Workflow.
